References

- ❖ LT is key in helping enterprises make sense of unstructured text documents
 - Internal documents, memos
 - News, external publications
 - Client feedback
 - ...
- ❖ Use cases
 - Facetted navigation, automatic indexing, document categorization, information & fact extraction, summarization

- ❖ LT depends heavily on resources such as terminologies, vocabularies, thesauri and rule sets
- ❖ Outside the english speaking world the existance and availability of these resources is often problematic
- ❖ Example
 - Wordnet: large resource on the semantics of english words
 - Used heavily by a broad range of approaches to LT questions
 - Equivalent in other languages? Either none or protected by hefty license fees
- ❖ EU as a driving force in the creation of equivalent resources that empower the European languages?!
