Website translation made easy

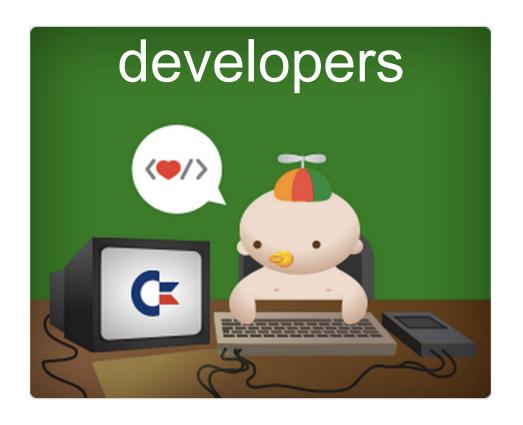

How to access new markets

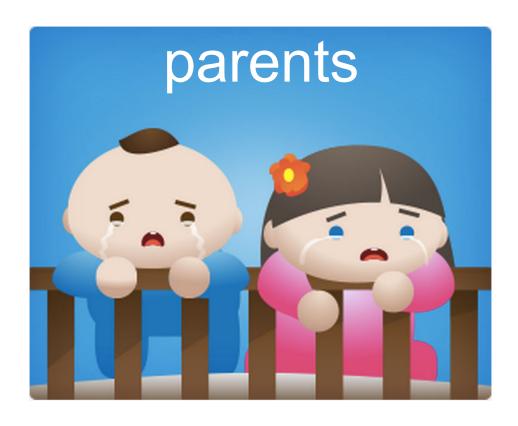

We are ...

since 1985, solving IT problems

knowing family needs time

Digital Single Market

About the website translation market

size: \$3.5 billion*

access: only LSPs with heavy IT resources

Why so IT-heavy?

Websites are not static HTML files anymore, but dynamical, stored in CMSs and databases

IT issues

Give instant quote

Extract the content

Translate in the context

Deliver without hassle

Easyling Translation Proxy

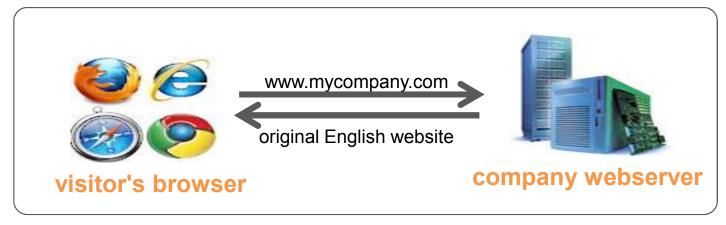

a SaaS solution

The technology behind

Solution & technology

Solution & technology

- Translated by language professionals, it is NOT a machine translation
- Stored at & served by Google App Engine (SLA: 99.95%)
- Original texts are replaced on the fly (proxy based solution)

Use cases

Marketing websites

Product catalogue

e-commerce

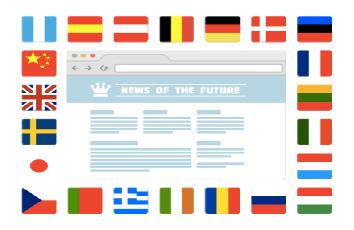

Product support forums

Digital Single Market

Product e-commerce catalogue

- Custom-built, legacy systems
- Not ready for internationalization (not even for localization)
- HUGE amount of content (e-commerce sites with 50M unique source words, 6 target languages) → expensive

Importance-based translation quality

- Immediate sales effect (ROI)
- Not all products, not all target languages are equally important
- Initial machine translation
- Increase translation quality selectively, based on Traffic Analysis
- Post edit, re-train MT engine

Afterlife

Product support forums

- Customers help themselves
- Language silos
- Bringing all the conversations
 into one silo: multilingual search
- Automatic source language detection
- Machine Translation
 - SEO visibility

Thank you!

Thank you for your attention!
